GCSE Subjects offered*:	English Language, Mathematics, Biology, Chemistry, Physics, Geography, Computer Science
Course fees:	£27,000 inclusive of VAT Includes all practicals, activities and field trips Excludes examination fees

* Additional subjects may be available upon request

What is the Sabrewing Programme?

The Sabrewing Programme harnesses the power of AI to offer GCSE and A Level students a personalised, self-paced learning experience. This is combined with a unique and robust life skills programme designed to raise ambitions, build resilience, inspire confidence and develop the practical abilities needed to thrive in the modern world.

Instead of attending traditional classes, students learn through AI-powered systems that adapt to their individual needs. Students are continuously assessed on every topic area within each course, and can take as much time as they need to master each topic. As soon as they have mastered a topic, they can move on right away. This mastery-based approach ensures that no student is ever left behind – or held back – as they learn, and uses every minute of learning time efficiently.

Throughout their studies, students remain closely supported by our dedicated team of learning coaches. These learning coaches are continuously reviewing learning data, providing additional support as required to ensure that every student is learning effectively and making progress. This support encourages positive learning behaviours and nurtures students into becoming confident, effective and independent lifelong learners.

Students also benefit from the input of subject specialist teachers for practicals and lab work, revision, coursework and exam practice, receiving targeted one-to-one support as required.

Key Features and Benefits

Accelerated, mastery-based learning

- Students take as much time as they need to master each topic, and only move on from a topic once they have achieved mastery in it.
- Any knowledge gaps students possess are quickly identified and filled with clinical precision.
- Students are always building on strong knowledge foundations as they progress through each course.
- Mastering one topic at a time builds students' confidence while also accelerating their learning.

Real-time support from Learning Coaches

- Our Sabrewing learning suite accommodates up to 14 students, all closely supported by our dedicated Sabrewing Learning Coaches.
- Learning Coaches are present with the students every day, managing the learning environment and ensuring each student is making good progress.
- They also provide additional support and targeted interventions as needed, and are responsible for delivering the life skills curriculum.

Robust life-skills programme

- AI-powered learning enables students to complete their academic work in the first half of each day.
- This frees up over 300 hours each year for students' broader personal growth and development.
- Whether participating in teamwork and leadership exercises, managing an investment portfolio in a stock market simulation, or scrambling up rock faces as part of a climbing challenge, our unique life skills programme supports students in venturing outside of their comfort zones, pushing past their boundaries.
- This not only raises students' ambitions, but also builds practical capabilities while increasing their self-confidence, resilience, and interpersonal skills.

Highlights

- Complete 5+ GCSEs or 2+ A Levels in just one year
- AI-powered, self-paced, personalised learning
- One-to-one coaching and mentoring
- Unique 300-hour life skills curriculum

Ideal for learners who thrive outside of traditional classrooms

- Students on the Sabrewing programme learn through technology, and at their own pace in a closely supported, small-group environment.
- This is well-suited to many students with social, emotional, mental health, and other special educational needs and disabilities.
- Students who can benefit the most from this programme include gifted learners who are not adequately challenged by the fixed pace of conventional teaching, as well as students who feel left behind in traditionally taught classes.

Purpose-built, high-tech learning suite

- Students spend a significant amount of time in our high-tech, AI-powered learning suite.
- Designed to feel like a home away from home, the space combines cutting-edge technology with a nature-inspired design, featuring a warm and colourful aesthetic.
- The resulting environment is not only highly conducive to learning, but also a space students genuinely enjoy spending time in.

Who is the programme for?

The Sabrewing Programme is an exciting alternative to traditional classroom education for students who find that the fixed pace and style of conventional teaching is either too challenging for them – or not challenging enough.

Students on the Sabrewing Programme follow completely personalised learning pathways, while still being able to learn alongside their peers in a closely supported academic setting at our City of London campus.

Dedicated learning coaches are always on hand, offering students one-to-one mentoring, encouragement, guidance and support to ensure that every student remains motivated and continues to make satisfactory progress.

How is the programme structured?

Students are taught at David Game College, where their day is structured to promote both their academic and personal development.

In the first half of the day, students engage in AI-powered learning, allowing them to advance at their own pace while benefiting from personalised support. In the second half of the day, the focus shifts to developing essential life skills.

This well-rounded approach equips students with the knowledge, confidence, practical and social skills needed for success not just academically, but also in their professional and personal lives.

What is the life skills programme?

Our holistic life skills programme includes growth mindset and resilience building, emotional awareness and regulation, public speaking and debate, the effective use of technology and AI, financial literacy, career planning and entrepreneurship, teamwork and leadership, and much more.

Students also engage in regular cognitive development and physical activities, from self-defence classes, rock climbing and horse riding, to applying their intellectual faculties and problem-solving skills to a wide range of tasks and challenges.

The programme also emphasises learning outside of the classroom, featuring regular outings and excursions to enrich students' education, while also supporting their personal and interpersonal development.
